- Wide Operating Voltage Range of 2 V to 6 V
- Outputs Can Drive Up To 10 LSTTL Loads
- Low Power Consumption, 80- $\mu \mathrm{A}$ Max ICC
- Typical $\mathrm{t}_{\mathrm{pd}}=20 \mathrm{~ns}$
- $\pm 4$-mA Output Drive at 5 V
- Low Input Current of $1 \mu \mathrm{~A}$ Max
- Look-Ahead Circuitry Enhances Cascaded Counters
- Fully Synchronous in Count Modes
- Parallel Asynchronous Load for Modulo-N Count Lengths
- Asynchronous Clear

## description/ordering information

The 'HC193 devices are 4-bit synchronous, reversible, up/down binary counters. Synchronous operation is provided by having all flip-flops clocked simultaneously so that the outputs change coincidentally with each other when so instructed by the steering logic. This mode of operation eliminates the output counting spikes normally associated with asynchronous (ripple-clock) counters.
The outputs of the four flip-flops are triggered on a low-to-high-level transition of either count (clock) input (UP or DOWN). The direction of counting is determined by which count input is pulsed while the other count input is high.

† Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## description/ordering information (continued)

All four counters are fully programmable; that is, each output may be preset to either level by placing a low on the load ( $\overline{\mathrm{LOAD}})$ input and entering the desired data at the data inputs. The output changes to agree with the data inputs independently of the count pulses. This feature allows the counters to be used as modulo-N dividers simply by modifying the count length with the preset inputs.

A clear (CLR) input has been provided that forces all outputs to the low level when a high level is applied. The clear function is independent of the count and $\overline{\text { LOAD }}$ inputs.

These counters were designed to be cascaded without the need for external circuitry. The borrow ( $\overline{\mathrm{BO}}$ ) output produces a low-level pulse while the count is zero (all outputs low) and DOWN is low. Similarly, the carry (CO) output produces a low-level pulse while the count is maximum ( 9 or 15), and UP is low. The counters then can be cascaded easily by feeding $\overline{\mathrm{BO}}$ and $\overline{\mathrm{CO}}$ to DOWN and UP, respectively, of the succeeding counter.
logic diagram (positive logic)

Pin numbers shown are for the D, J, N, NS, PW, and W packages.

## 4-BIT SYNCHRONOUS UP/DOWN COUNTERS (DUAL CLOCK WITH CLEAR) <br> SCLS122C - DECEMBER 1982 - REVISED DECEMBER 2002

## typical clear, load, and count sequence

The following sequence is illustrated below:

1. Clear outputs to 0
2. Load (preset) to binary 13
3. Count up to 14,15 , carry, 0,1 , and 2
4. Count down to 1,0 , borrow, 15,14 , and 13

NOTES:
A. CLR overrides $\overline{\text { LOAD, data, and count inputs. }}$
B. When counting up, count-down input must be high; when counting down, count-up input must be high.

|  |  | $\mathrm{V}_{\mathrm{CC}}=6 \mathrm{~V}$ |  |  | 400 |  |  | 400 |  |
| $\mathrm{T}_{\text {A }}$ | Operating free-air temperature |  | -55 |  | 125 | -40 |  | 85 | ${ }^{\circ} \mathrm{C}$ |

NOTE 3: All unused inputs of the device must be held at $\mathrm{V}_{\mathrm{CC}}$ or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.
$\ddagger$ If this device is used in the threshold region (from $\mathrm{V}_{\text {IL }} \max =0.5 \mathrm{~V}$ to $\mathrm{V}_{\mathrm{IH}} \min =1.5 \mathrm{~V}$ ), there is a potential to go into the wrong state from induced grounding, causing double clocking. Operating with the inputs at $t_{t}=1000 \mathrm{~ns}$ and $\mathrm{V}_{\mathrm{CC}}=2 \mathrm{~V}$ does not damage the device; however, functionally, the CLK inputs are not ensured while in the shift, count, or toggle operating modes.
